SUMMARY

Career-switching Junior Backend / Fullstack Developer based in Berlin. Completed DCI’s full-time Python Backend program and am advancing through 42 Berlin’s Software Engineering curriculum. Recently shipped a live multiplayer web game ([Seasons of Floripa](#)) as Feature Lead for Social & Profiles (auth, friends, chat). Comfortable with TypeScript, Python/Django, SQL, and Git. Brings 10+ years of client-facing and operations experience—clear communication, ownership, and reliability under pressure. Looking for a junior backend or fullstack role where I can contribute from day one and grow with mentorship.

Stack: TypeScript · Python · Django · Flask · SQL · HTML/CSS · Git/GitHub · C · C++ · Kotlin (in progress)

TECHNICAL PROJECTS

Seasons of Floripa — Real-time multiplayer web game (42 Berlin Transcendence) - Live (<https://seasonsoffloripa.com/>) · [GitHub](#)

- Capstone team project at 42 Berlin: a live multiplayer fishing adventure inspired by Florianópolis, shipped as an MVP on the web.
- Feature Lead for Social & Profiles — owned auth, user profiles, friends, and chat in a TypeScript monorepo with real-time multiplayer architecture.
- Collaborated in a 4-person team (career switchers) across frontend, game engine, mechanics, and DevOps/WebSockets to deliver a playable product.

DrinkMeUp — Django cocktail recommender - Live (<https://drinkmeup.pythonanywhere.com/>) · [GitHub](#)

- Built a full Django web app that recommends cocktails from user preferences and tracks drinks made on a profile page.
- Implemented authentication (signup, login, logout, password reset/change) plus Google OAuth via django-allauth.
- Modelled data in SQLite and deployed the app on PythonAnywhere.

Fuel Calculator — Android / Kotlin - [GitHub](#)

- Multi-step Android app that estimates trip fuel cost from destination, distance, car consumption, and price per litre.
- Built with Kotlin, View Binding, and multiple Activities (landing → inputs → result), with Snackbar input validation and Intent navigation.

Inventory Management System — Python + SQLite - [GitHub](#)

- Built a CRUD inventory tool for small businesses: add, display, update, and delete products in SQLite through a UI.
- Structured product data and database operations for reliable create/read/update/delete workflows.

EDUCATION

May 2025 - Present

Berlin (Germany)

Nov 2024 - Present

Remote

Aug 2023 - Aug 2024

Berlin (Germany)

● 42 BERLIN

Software Engineer (In Progress)

Low-level programming, algorithms, and problem-solving in C/C++.

● DEVSPACE

Android & Kotlin Mobile Development (In Progress)

● DCI - DIGITAL CAREER INSTITUTE

Python Backend Programming

Full-time program focused on Python, Django/Flask, SQL, APIs, and collaborative Git workflows.
